

The laboratory in principle provides all its equipment and instrumentation for measurement services to the national or international industry. However the majority of services provided by the laboratory do not concern the execution of certain types of measurements to specified samples. Instead the laboratory is confronted by external customers with questions the answering of which requires to a certain extent the execution of research. In that sense the laboratory executes service in the form of research. Below a list of services provided by the laboratory to external customers.

External Customer
Service Required

HispanoFerritas-Spain	Product failure causes identification
Ferroxcube-the Netherlands	Benchmarking and competitor material analysis and evaluation
FerPol-Poland	Method development for unit operation and process control
Filippoulou-Greece	Evaluation of membrane processes for BOD reduction in olive oil
Municipality of N.Efkarpia-Greece	Evaluation of atmospheric pollution around the community
Siemens-Greece	Accelerated life time test methods in telecom modules.
Core Consulting-Germany	Evaluation of nanoparticles prepared by different methods
Thyssen Krupp Stahl-Germany	Evaluation of membrane process for upgrading liquid waste stream
Institute of Materials, Demokritus-Greece	Preparation of spinel ferrite targets for gas phase deposition
University of Ioannina-Greece	Testing of the catalytic activity of various perovskite materials
